ASCENSEURS

Modernisation

Modernise the electrical equipment of an existing lift

Complete electrical package | Matched motor on request | In stock | Ready to ship

Replace the controller, wiring and signalling of a lift in service with a complete Sodimas electrical package, in stock. On request, we also supply a motor matched to the installation.

MODERNISATION

Why modernise?

A modern controller

QI Touch controller, EN 81-20 and EN 81-50 compliant, with touch screen and built-in help, replacing a controller whose parts are no longer available.

Precise stops

Limax absolute positioning and the drive give millimetre-accurate stops and smooth starts.

New signalling

M3 car operating panel and Blackpad landing stations, EN 81-70 compliant, in gold or silver.

A connected lift

The QI Touch is compatible with Sodimas remote monitoring to follow the lift from a distance.

What we supply

The Residential Pack

QI Touch controller, complete labelled wiring, Limax, signalling and firefighter box, in stock.

A matched motor

On request: a motor selected for your installation, gearless or geared.

Useful options for renovation

Re-use of existing buttons (24 Vdc, 1.2 W max), manual landing doors, contactor-driven door operator, multi-voltage brake and cam.

MODERNISATION

Multi-brand modernisation kits for machine-room-less lifts

For machine-room-less lifts of the major brands, Sodimas has developed dedicated kits with CE design approval. Two levels of modernisation are possible; in both cases the original car door operator can be kept with an electrical adaptation, or replaced.

A · Electrical part only

QI Touch controller, shaft and machinery wiring, operating panels: everything is replaced, the original drive is kept.

B · Electrical and mechanical

On top of the electrical part, the machine is replaced in place by a Sodimas gearless machine, with its support, ropes or belts.

Landing controller

Depending on the lift: wired board fitted in the existing box or door jamb, or surface-mounted cabinet, with a power box in the shaft.

Certified machine

The replacement gearless machines, with monitored brakes, are CE certified for unintended car movement (UCM) and ascending overspeed.

Brands covered

Otis · Kone · Schindler · Thyssen · Orona · Omega · Imem · Dalboss · Mac Puarsa · Sodimas

Landing controller, before and after

Machine replaced in place

PACK COPRO

Pack Copro: electrical renovation for low-rise buildings

Developed for low-rise buildings, the Pack Copro combines the QI Touch touch-screen controller, Fuji Frenic Lift 2 drive, Limax absolute positioning, complete wiring and EN 81-70 signalling.

- Up to 8 floors, 1 m/s
- 400 V three-phase supply, drive up to 11 kW
- Open-loop induction motor; closed loop or synchronous gearless as options
- 1 or 2 accesses, automatic car door
- Simplex, down-collective or full-collective operation
- M3 operating panels and colour TFT indicators

Your modernisation, step by step

01 · Survey

Photos of the controller, motor nameplate and shaft; number of floors and floor-to-floor distance.

02 · Offer

We define the pack, options and any motor, then send you our offer.

03 · Shipping

The equipment ships from Europe with all export documents.

04 · Installation

By your lift company, the partner of your choice or our network of installers.
